

Profile Summary

Analytical and solution-oriented Data Analyst with expertise in SQL, Python, Power BI, and Excel. Experienced in building dashboards, performing exploratory data analysis, and developing data-driven solutions through internships and end-to-end projects. Committed to delivering actionable insights, optimizing business processes, and creating measurable impact through analytics.

Professional Skill

Languages: Python, SQL Libraries & Frameworks: Pandas, NumPy, Matplotlib, Scikit-learn

Tools & Platforms: Power BI, Excel Database: MySQL

ML Concepts : Classification, Feature Engineering, Predictive Analytics, Data Preprocessing, EDA

Professional Skills: Stakeholder communication, Cross-functional collaboration, Analytical problem-solving

Education

Sri Ramaswamy Institute of Science & Technology

Masters Of Computer Applications: Specialized in Generative AI 2026 - Present

Bachelor in Computer Applications: Specialized In Data Science CGPA: 8.29 2023-2026

Ch. Chhabil Dass Public School

High School [Class XII]: 82% [PCM]

Senior Secondary [Class X]: 90%

Work Experience

Data Analyst Intern Excelerate[Dubai] (Co-hosted by Saint Louis University) Sep 2025- Oct 2025

- Analyzed applicant and outreach data to support a 15% enrollment growth target.
- Collaborated with an international team to streamline data processes and improve reporting efficiency.
- Awarded Star Performer and \$1,000 scholarship by Saint Louis University for outstanding performance.

AI- Data Analyst Intern Excelerate[Dubai] (Co-hosted by Saint Louis University) Oct 2025- Nov2025

- Led a global team and improved product data accuracy by 25% through advanced preprocessing and feature engineering.
- Built and evaluated ML models; developed a recommendation system to boost user retention.
- Awarded Star Performer for exceptional performance and leadership

Projects

HR Attrition Analysis

- Analyzed employee records to identify major drivers of attrition.
- Created Power BI dashboards tracking attrition trends across departments.
- Generated actionable retention insights through data-driven analysis.

Fake Job Detection Analysis

- Performed EDA on job posting datasets containing thousands of records.
- Applied feature engineering techniques to identify fraud indicators.
- Developed classification models for detecting fake job listings.
- Created visual reports highlighting fraud patterns and risk factors.

Automated Analytics System

- Built an end-to-end analytics pipeline using Python and Pandas.
- Automated KPI reporting and anomaly detection, reducing manual analysis effort by 70%.
- Developed sales forecasting models and interactive Streamlit dashboards for business insights.
- Implemented automated email alerts for performance deviations.
